Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Elliott Austin

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Michael Rispoli

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
John Pavone

Albany, New York 12226

RE: Trades Update: Carpenters Appendix A/B revision

Dear Mr. Pinheiro,

Sam Greco Construction Inc. is pleased to provide the letter of support to the proposed Carpenters Union Apprenticeship Revision to Appendix A/B (O*NET-Code 47-2031.00) for work processes and related instruction. These trade updates will ensure that a skilled workforce is meeting our green energy and sustainable building goals through the expeditious construction of solar projects as well as an increase in building projects utilizing sustainable building materials including mass timber across the State.

I have worked with the Carpenters Union for several years as a signatory contractor across the State of New York. I strongly feel that the requested revision be approved as they fit very naturally into the Carpenters existing skill set and this training is a mandatory element to help New York State build the energy generation infrastructure necessary to meet the ambitious goals outlined in the Climate Leadership and Community Protection Act, as well as using more sustainable building materials including mass timber that decrease the carbon footprint of future building projects.

Our company knows with certainty that when we call the Carpenters Union for man power, we get a trained workforce that we can depend on to get the project completed on time.

The man power necessary to finish projects to meet New York State's nation leading green energy and sustainable building goals will be significant: there is \$15 Billion in solar work currently in bidding, planning, or construction in New York, which is keeping our state on the path to a goal of 20 Gigawatts by 2035. A trained work force is needed to complete this work, these training clarifications will help ensure that workforce is prepared for an accelerated deployment of solar across the State.

Contractors use the Carpenters because they know our training programs and how effective they are in teaching their apprentices a safe and effective way to construct solar projects. This saves the contractor time and money which enables us to bid more work and put more apprentices to work. Ultimately, it means solar projects are constructed across the State as quickly as possible.

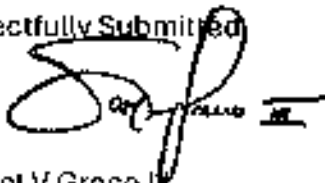

Furthermore, the *Federal Inflation Reduction Act* standards mandate a 15% apprenticeship ratio on solar projects to receive tax credits. The Carpenters Union has around 1500 apprentices in NYS that can be trained effectively in solar installation and meet these goals. As a signatory contractor to the Carpenters Union, if the appendix A revision is not accepted, our company would not be able to bid these projects.

When it comes to mass timber, newer and more sustainable building products like cross-laminated timber ("CLT"), laminated veneer lumber ("LVL"), and glue laminated timber ("glulam") require specific training and skill sets. The Carpenters meet this need on projects across the State. It is important that we have a workforce trained in mass timber and engineered wood products that will allow companies like mine to complete projects more efficiently and with a lower carbon footprint. Some of the benefits of mass timber are it is lightweight; it allows for faster installation; and finally and perhaps most importantly, it has a significantly lower carbon footprint than other building materials.

My company is working on projects that will mean a more sustainable building and energy ecosystem for New York State in line with the greenhouse gas reduction and renewable energy utilization goals of statewide decision makers. I need a trained workforce that understands the complex construction tasks that come with these projects. These projects require well trained Carpenters and apprentices to get the project done in a safe and effective manner. These revisions will help ensure that we continue to have access to the most qualified workforce possible.

I sincerely hope to see these apprenticeship revisions approved expeditiously. Should you have any questions, please do not hesitate to contact me.

Respectfully Submitted

These trade updates will ensure that a skilled workforce is meeting our green energy and sustainable building goals through the expeditious construction of solar projects as well as an increase in building projects utilizing sustainable building materials including mass timber across the State.

I have worked with the Carpenters Union for several years as a signatory contractor across the State of New York. I strongly feel that the requested revision be approved as they fit very naturally into the Carpenters existing skill set and this training is a mandatory element to help New York State build the energy generation infrastructure necessary to meet the ambitious goals outlined in the Climate Leadership and Community Protection Act, as well as using more sustainable building materials including mass timber that decrease the carbon footprint of future building projects.

Our company knows with certainty that when we call the Carpenters Union for manpower, we get a trained workforce that we can depend on to get the project completed on time.

The manpower necessary to finish projects to meet New York State's nation leading green energy and sustainable building goals will be significant: there is \$15 Billion in solar work currently in bidding, planning, or construction in New York, which is keeping our state on the path to a goal of 20 Gigawatts by 2035. A trained workforce is needed to complete this work, these training clarifications will help ensure that the workforce is prepared for an accelerated deployment of solar across the State.

Contractors use the Carpenters because they know our training programs and how effective they are in teaching their apprentices a safe and effective way to construct solar projects. This saves the contractor time and money, which enables us to bid more work and put more apprentices to work. Ultimately, it means solar projects are constructed across the State as quickly as possible.

Furthermore, the Federal *Inflation Reduction Act* standards mandate a 15% apprenticeship ratio on solar projects to receive tax credits. The Carpenters Union has around 1500 apprentices in NYS that can be trained effectively in solar installation and meet these goals. As a signatory contractor to the Carpenters Union, if the appendix A revision is not accepted, our company would not be able to bid these projects.

When it comes to mass timber, newer and more sustainable building products like cross-laminated timber (“CLT”), laminated veneer lumber (“LVL”), and glue laminated timber (“glulam”) require specific training and skill sets. The Carpenters meet this need on projects across the State. It is important that we have a workforce trained in mass timber and engineered wood products that will allow companies like mine to complete projects more efficiently and with a lower carbon footprint. Some of the benefits of mass timber are that it is lightweight; it allows for faster installation; and finally, and perhaps most importantly, it has a significantly lower carbon footprint than other building materials.

My company is working on projects that will mean a more sustainable building and energy ecosystem for New York State in line with the greenhouse gas reduction and renewable energy utilization goals of statewide decision makers. I need a trained work force that understands the complex construction tasks that come with these projects. These projects require well trained Carpenters and apprentices to get the project done in a safe and effective manner. These revisions will help ensure that we continue to have access to the most qualified workforce possible.

I sincerely hope to see these apprenticeship revisions approved expeditiously. Should you have any questions, please do not hesitate to contact me at Chris@jdtraditional.com

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Dereklee McNeil

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Nelson Moreno

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Cooper Gates

We now have revised and updated the training to include Appendix A. This will give both apprentice and journeyman carpenters the opportunity to be trained in both solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects and the reason that contractors use Union Carpenters is that they are properly trained to perform the work safely and effectively. I look forward to upgrading my qualifications and perform the work.

Thank you,

Gerald Dee

RE: Trades Update: Carpenters Appendix A/B revision

Dear Mr. Pinheiro,

Ronsco, Inc. is pleased to provide the letter of support to the proposed Carpenters Union Apprenticeship Revision to Appendix A/B (O*NET-Code 47-2031.00) for work processes and related instruction. These trade updates will ensure that a skilled workforce is meeting our green energy and sustainable building goals through the expeditious construction of solar projects as well as an increase in building projects utilizing sustainable building materials including mass timber across the State.

I have worked with the Carpenters Union for several years as a signatory contractor across the State of New York. I strongly feel that the requested revision be approved as they fit very naturally into the Carpenters existing skill set and this training is a mandatory element to help New York State build the energy generation infrastructure necessary to meet the ambitious goals outlined in the Climate Leadership and Community Protection Act, as well as using more sustainable building materials including mass timber that decrease the carbon footprint of future building projects.

Our company knows with certainty that when we call the Carpenters Union for man power, we get a trained workforce that we can depend on to get the project completed on time.

The man power necessary to finish projects to meet New York State's nation leading green energy and sustainable building goals will be significant: there is \$15 Billion in solar work currently in bidding, planning, or construction in New York, which is keeping our state on the path to a goal of 20 Gigawatts by 2035. A trained work force is needed to complete this work, these training clarifications will help ensure that workforce is prepared for an accelerated deployment of solar across the State.

Contractors use the Carpenters because they know our training programs and how effective they are in teaching their apprentices a safe and effective way to construct solar projects. This saves

Building Your Reputation
Since 1960

the contractor time and money which enables us to bid more work and put more apprentices to work. Ultimately, it means solar projects are constructed across the State as quickly as possible.

Furthermore, the Federal *Inflation Reduction Act* standards mandate a 15% apprenticeship ratio on solar projects to receive tax credits. The Carpenters Union has around 1500 apprentices in NYS that can be trained effectively in solar installation and meet these goals. As a signatory contractor to the Carpenters Union, if the appendix A revision is not accepted, our company would not be able to bid these projects.

When it comes to mass timber, newer and more sustainable building products like cross-laminated timber (“CLT”), laminated veneer lumber (“LVL”), and glue laminated timber (“glulam”) require specific training and skill sets. The Carpenters meet this need on projects across the State. It is important that we have a workforce trained in mass timber and engineered wood products that will allow companies like mine to complete projects more efficiently and with a lower carbon footprint. Some of the benefits of mass timber are it is lightweight; it allows for faster installation; and finally and perhaps most importantly, it has a significantly lower carbon footprint than other building materials.

My company is working on projects that will mean a more sustainable building and energy ecosystem for New York State in line with the greenhouse gas reduction and renewable energy utilization goals of statewide decision makers. I need a trained work force that understands the complex construction tasks that come with these projects. These projects require well trained Carpenters and apprentices to get the project done in a safe and effective manner. These revisions will help ensure that we continue to have access to the most qualified workforce possible.

I sincerely hope to see these apprenticeship revisions approved expeditiously. Should you have any questions, please do not hesitate to contact me via email @ lz@ronscoinc.com or 212-627-0500].

Respectfully Submitted,

Sincerely,

RONSCO INC.

RE: Trades Update: Carpenters Appendix A/B revision

Dear Mr. Pinheiro,

As the Assistant Executive Secretary-Treasurer I pleased to provide the letter of support to the proposed Carpenters Union Apprenticeship Revision to Appendix A/B (O*NET-Code 47-2031.00) for work processes and related instruction. These trade updates will ensure that a skilled workforce is meeting our green energy and sustainable building goals through the expeditious construction of solar projects as well as an increase in building projects utilizing sustainable building materials including mass timber across the State.

I have worked with Union Signatory Carpentry Contractors across the State of New York. I strongly feel that the requested revisions be approved as they fit very naturally into the Carpenter's existing skill set. This training is a mandatory element to help New York State build the energy generation infrastructure necessary to meet the ambitious goals outlined in the Climate Leadership and Community Protection Act and use more sustainable building materials including mass timber that decrease the carbon footprint of future building projects.

The manpower necessary to finish projects to meet New York State's nation-leading green energy and sustainable building goals will be significant: there is \$15 Billion in solar work currently in bidding, planning, or construction in New York, which is keeping our state on the path to a goal of 20 Gigawatts by 2035. A trained workforce is needed to complete this work, these training clarifications will help ensure that the workforce is prepared for an accelerated deployment of solar across the State.

Contractors use the Carpenters Union because they know our training programs and how effective they are in teaching the apprentices a safe and effective way to construct solar projects. This saves the contractor time and money, which enables the Contractor to bid more work. Ultimately, it means solar projects are constructed across the State as quickly as possible.

Furthermore, the Federal *Inflation Reduction Act* standards mandate a 15% apprenticeship ratio on solar projects to receive tax credits. The Carpenters Union has around 1500 apprentices in NYS who can be trained effectively in solar installation and meet these goals. Signatory contractors know, that if the Appendix A revision is not accepted, know that they will not be able to bid on these projects.

When it comes to mass timber, newer and more sustainable building products like cross-laminated timber ("CLT"), laminated veneer lumber ("LVL"), and glue laminated timber ("glulam") require specific training and skill sets. Union Carpenters and Apprentices meet this need on projects across the State. We must have a workforce trained in mass timber and engineered wood products that will allow companies to complete projects more efficiently and with a lower carbon footprint.

I sincerely hope to see these apprenticeship revisions approved expeditiously. Should you have any questions, please do not hesitate to contact me at [REDACTED]

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Luis Joyasaca

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Casey Specht

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposes Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,

[REDACTED]

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,

[REDACTED]

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Carpenters Training Fund's efforts to revise their Appendix A/B curriculum for solar and mass timber training.

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Louis Greer

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposes Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
maxwell vittie

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Richard Evangelista

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
David Reppenhagen

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Dennis Messenger

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposes Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Wesley Warrior

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Nysia Stroud

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Zachary Winney

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Carlos Chuchuca

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Sallina Hann

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposes Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
(John) Joao Nunes

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
James Conlin 1575

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Kelvin Turcios

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Nate Watkins

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
James Conlin 1575

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposes Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Miguel Rodriguez

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Sallina Hann

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Jordan Arzu Thomas

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Manuel Anguisaca

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Thomas Williams

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Jeff Sill

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Michael Mastrantuono

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Richard Bischof

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Frank Catlin

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Michael Topf

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Randy Schultz

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Daniel Burlingham

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
James Dunfee

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Joshua Niemi

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Bertram Kane

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Anthony Suchan

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Sabatino Fusco

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
George Klimar

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposes Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Mario Ruperto

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Timothy Heslop

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Codie McGuane

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Bradford Bochniak

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
James Fisher

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
George Baldwin

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Brandan Reising

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Jose Mendez

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Kevin Mooney

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Ray Sigtermans

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Joseph Lynch

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Seth Banach

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

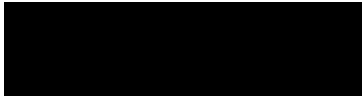

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Zachary Middleton

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposes Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Nathan Johnson

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Michael DeC DeCarlo

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Scott O'Harrow

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposes Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Candice Gasson

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am a union carpenter in New York State writing to strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training.

The world of construction is everchanging. Carpenters are consistently at the forefront of that by continuing to train our members with the best cutting-edge technology and most knowledgeable instructors.

Even in this fast-paced world, the training for solar and mass timber is bread and butter for carpenters like me. It comfortably fits under the umbrella of what it means to be a well-trained, hard-working carpenter in New York State. That is why I support revising Appendix A/B to clarify this.

Thank you,

Sincerely,
Mike McKeever

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

I am submitting this comment to support the proposed Carpenters Union Apprenticeship revision to Appendix A/B (O*NET-Code 47-2031.00).

As a member of the Carpenters Union, I strongly support the North Atlantic States Regional Council of Carpenters' efforts to revise their Appendix A/B curriculum for solar and mass timber training in New York State. The Carpenters Union has been successfully teaching solar installation through our New York State Department of Labor approved apprenticeship curriculum since 2006 in appendix B. We have now revised and updated the training to include Appendix A.

This will give both apprentice and journeyman carpenters the opportunity to be trained in solar and mass timber construction and upgrade their skill set. Proper training prevents poor performance on projects - trained workers perform more safely and effectively. I know I look forward to upgrading my qualification and performing this work.

Thank you,

Sincerely,
Vincent Uzzo

Dear NYS DOL New York State Department of Labor,

New York State Department of Labor,

As a union carpenter working to build the great State of New York, I know it is the training that is the backbone of safe and efficient development. In this new green economy, training workers like me is more important than ever before.

It is Carpenter Union members that will build the infrastructure that pushes New York State to meet its climate goals, build a future for our children, and continue to call it a home. This is why I am writing to strongly support the North Atlantic States Regional Council of Carpenters efforts to revise their Appendix A/B curriculum for solar and mass timber training.

As our industry changes, the mechanics of our work that it takes to meet the new needs stays the same. This work is well within the wheelhouse of Union Carpenters and that is why I am writing to support clarifying the language in our apprenticeship program.

Thank you,

Sincerely,
Allen Dibble

Contractors use the Carpenters because they know the training programs and how effective they are in teaching their apprentices a safe and effective way to construct solar projects. This saves the contractor time and money, which enables us to bid more work and put more apprentices to work. Ultimately, it means solar projects are constructed across the State as quickly as possible.

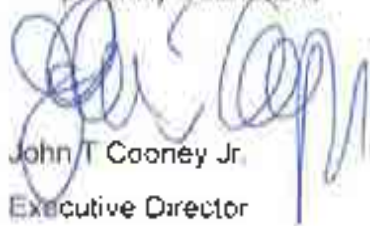

Furthermore, the *Federal Inflation Reduction Act* standards mandate a 15% apprenticeship ratio on solar projects to receive tax credits. The Carpenters Union has around 1500 apprentices in NYS who can be trained effectively in solar installation and meet these goals. As a signatory contractor to the Carpenters Union, if Appendix A revision is not accepted, our company would not be able to bid on these projects.

When it comes to mass timber, newer and more sustainable building products like cross-laminated timber ("CLT"), laminated veneer lumber ("LVL"), and glue laminated timber ("glulam"), require specific training and skill sets. The Carpenters meet this need on projects across the State. We must have a workforce trained in mass timber and engineered wood products that will allow companies like mine to complete projects more efficiently and with a lower carbon footprint. Some of the benefits of mass timber are that it is lightweight, it allows for faster installation, and finally, and perhaps most importantly, it has a significantly lower carbon footprint than other building materials.

Companies working on these projects mean a more sustainable building and energy ecosystem for New York State in line with the greenhouse gas reduction and renewable energy utilization goals of statewide decision-makers. We need a trained workforce that understands the complex construction tasks that come with these projects. These projects require well-trained Carpenters and apprentices to get the project done safely and effectively. These revisions will help ensure that we continue to have access to the most qualified workforce possible.

I sincerely hope to see these apprenticeship revisions approved expeditiously. Should you have any questions, please do not hesitate to contact me at 914-582-8399 or john@cicnys.org.

Respectfully Submitted,

RE: Trades Update: Carpenters Appendix A/B revision

Dear Mr. Pinheiro,

Construction Contractors Association of the Hudson Valley pleased to provide the letter of support to the proposed Carpenters Union Apprenticeship Revision to Appendix A/B (C*NE-I-Code 47-2031.00) for work processes and related instruction. These trade updates will ensure that a skilled workforce is meeting our green energy and sustainable building goals through the expeditious construction of solar projects as well as an increase in building projects utilizing sustainable building materials, including mass timber across the State.

I have worked with the Carpenters Union for several years across the State of New York, and I strongly feel that the requested revision be approved. This fits very naturally into the Carpenters existing skill set, and this training is a mandatory element to help New York State build the energy generation infrastructure necessary to meet the ambitious goals outlined in the Climate Leadership and Community Protection Act, as well as using more sustainable building materials including mass timber that decrease the carbon footprint of future building projects.

Our Association knows with certainty that when our Contractors call the Carpenters Union for manpower, they get a trained workforce that they can depend on to get the project completed on time.

The manpower necessary to finish projects to meet New York State's nation-leading green energy and sustainable building goals will be significant: there is \$15 Billion in solar work currently in bidding, planning, or construction in New York, which is keeping our state on the path to a goal of 20 Gigawatts by 2035. A trained workforce is needed to complete this work, those training clarifications will help ensure that the workforce is prepared for an accelerated deployment of solar across the State.

Contractors use the Carpenters because they know the training programs and how effective they are in teaching their apprentices a safe and effective way to construct solar projects. This saves the

contractor time and money, which enables us to bid more work and put more apprentices to work. Ultimately, it means solar projects are constructed across the State as quickly as possible.
