

Improving the Count of Young Children in the 2020 Census

New York State Data Center Annual Affiliate Meeting

Karen Deaver

Chair, 2020 Census Undercount of Young Children Task Force
Decennial Census Programs Directorate,

Ashley Austin

Communications Lead, Improving the Count of Young Children in the 2020 Census
Communications Directorate

May 23, 2019

Outline

- Overview of the Issue
- Our Approach
- Who is at Risk of Being Undercounted
- What are We Doing About It?
- How can YOU Help?

What is the Issue?

- In 2010, the estimated net undercount for children age 0 to 4 was 4.6%, or nearly 1 million young children
- The undercount of young children has been a persistent issue in the census
- The net undercount of young children has increased in recent decades where the undercount for other groups has decreased.

What is the Issue?

- An undercount of children has implications for:
 - Political representation
 - Federal funding for programs such as:
 - Temporary Assistance for Needy Families
 - Special Education Grants
 - National School Lunch Program
 - Community planning
 - Schools
 - Libraries
 - Health Services
 - Recreational and Green Space areas

Our Approach

- 2013-2014 – Informal Task Force
- 2015 – Undercount of Young Children (UYC) Research Team
- 2017 – UYC Implementation Team
 - Within the Coverage Improvement Integrated Project Team
- 2018 – 2020 Census UYC Task Force

Who is At Risk of Being Undercounted?

Household or Child Characteristics	Complex Household
Young children living in <u>Complex Households</u> (see column on right)	<p>A complex household is a household that is NOT a nuclear family or single-parent family. Complex households include:</p> <ul style="list-style-type: none"> • Households with unrelated persons • Multi-generational households • Households with relatives other than parents and children • Blended families <p>In the 2010 Census, 50% or more of children in the categories below were in complex households:</p> <ul style="list-style-type: none"> • Black • American Indian/Alaskan Native • Native Hawaiian /Pacific Islander • Hispanic
Young children living in <u>rental</u> units	
Young children living in a household that was <u>not enumerated by self-response</u>	
Young children living with <u>young householder</u> (under age 30)	
Young children living in a <u>low-income household</u>	
Young children living in a household with <u>limited English speaking ability</u>	
Young children living in <u>very small households</u> (2 people) or in <u>very large household</u> (6 or more people)	
Young children who <u>moved in the past year</u>	
Young children <u>living with a grandparent</u>	
Children <u>born in the 3 months before Census Day</u> (January 1 to April 1)	

What We Are Doing About It

- Production Operations
- Communications and Partnerships
- Evaluation of 2020 and Preparation for 2030

Production Operations – General

- General Innovations and Improvements in 2020 Census
 - Improve quality and coverage of MAF
 - Increase number of languages available for response
 - Allow people to respond without their Census ID
 - Add internet as response mode and keep paper and telephone
 - Use administrative data to improve nonresponse followup
- Optimized internet response for use on mobile phones
- Allow multiple responses from one computer
- Allow multiple responses from one household via Non-ID
- Non-paper modes allow for more than 10 people

Production Operations – Clarifying Language

- Updated the language on the primary solicitation materials that most households will receive in 2020

“...all adults, children, and babies living or staying at this address”

» **instead of...**

“...everyone living or staying at this address”

Production Operations – Clarifying Language

- Updated the wording of the undercount probe on the questionnaire to specifically mention “grandchildren” and “unrelated” children
- Automated instruments will allow respondents to add these people in real time

2010 Undercount Probe

2. Were there any additional people staying here April 1, 2010 that you did not include in Question 1?

Mark all that apply.

Children, such as newborn babies or foster children

2018 Undercount Probe

2. Were there any additional people staying here on April 1, 2018 that you did not include in Question 1?

Mark all that apply.

Children, related or unrelated, such as newborn babies, grandchildren, or foster children

Production Operations – Clarifying Language

- In the Coverage Improvement instrument, there are two undercount probes – one specifically for children and one for others:

I'd like to make sure that we are not missing anyone who lived or stayed at <ADDRESS>.

Were there any babies, children, grandchildren, or foster children who lived there on April 1, 2020 who are not on the list?

- Yes
- No

Were there any additional people living or staying there, such as relatives, nonrelatives, roommates, or anyone without a permanent place to live, who are not on the list?

- Yes
- No

Production Operations – Clarifying Language

- Updated the help text on the internet self-response instrument to provide additional guidance about counting children. Example:
 - Using those guidelines, be sure to INCLUDE the following types of people if they will be living or staying at <ADDRESS> most of the time around <REFDATE>:
 - Babies and children of all ages (even newborns and infants), including biological, step, and adopted children, as well as grandchildren, foster children, and children in joint custody arrangements.
 - Any other close or extended family members living there, even partners, grandparents, cousins, in-laws, etc.
 - <List continues>
- NRFU, CQA, and CI instruments also have help text and FAQs related to counting children.

Production Operations – Improved Training

- Updated training for Nonresponse Followup enumerators
 - Specific mentions of counting children and knowledge check questions for on-line training
 - Case study for in-class training involving respondent who is confused about whether to count grandchild
- Updated training for Census Questionnaire Assistance (telephone) enumerators and Coverage Improvement interviewers
- Included content and topics related to the undercount of young children in the Frequently Asked Questions available for field and telephone enumerators

Communication & Partnership – CBAMS

For those reporting having young children vs those who reported not having them:

- Intent to respond was lower
- Preference for online vs paper
- Less familiar with census and had more misconceptions about it
- Similar barriers as those without kids
- More motivated by community-oriented reasons, especially determine funding for public services in community like daycare and schools & education

NOTE: Other factors were not controlled, and may confound interpretation. For example, respondents who reported having young children may be younger than respondents who didn't report having young children. So, some results may be what we would see in a simple comparison of younger vs. older respondents.

Communication & Partnership – Messaging

- Specific campaign “to Improve the Count of Young Children”
- Themes involving young children are woven throughout the media campaign
 - Every focus group has someone with child(ren)
 - El Paso and Philadelphia exclusively had participants with child(ren)
- Messaging includes the multiple ways to respond
- Kid-focused social media and promotional items
- Direct mailing in target areas
 - Developing a more robust “hard to count” score specifically for undercounted young children

Communication & Partnership – National & Local

- Providing information to educate partners about the problem and its impact
- Working with partners to develop information and products, and identify assistance they can provide in their communities
- Partnership specialists FOCUSED on the Undercount of Young Children
- Efforts include:
 - Census Innovation Workshops
 - Webinars with Stakeholders
 - Census Blog
 - Infographic
 - Statistics in Schools

<http://getmespark.com/wp-content/uploads/internet-business-partnership.jpg>

Communication & Partnership – Infographic

- Infographic that describes situations where children may be missed and suggests ways for partners to discuss these with individuals & communities
- Posted to census.gov on August 29, 2018

Counting Young Children in the 2020 Census

Counting everyone once, only once, and in the right place

An estimated 5 percent of kids under the age of 5 weren't counted in the 2010 Census. That's about 1 million young children, the highest of any age group.

We need your help closing this gap in the 2020 Census. Here's what our research tells us about why young children are missed and what you can do to help make sure they are counted.

Common situations where young children aren't counted

The **child splits time between two homes.**
The child lives or stays with **another family or with another relative such as a grandparent.**

How you can help?

- Emphasize that the census counts **everyone where they live** and sleep most of the time, even if the living arrangement is temporary or the parents of the child do not live there.
- If the child truly spends equal amounts of time between two homes, count them where they stayed on **Census Day, April 1**. Coordinate with the other parent or caregiver, if possible, so the child is not counted at both homes.
- If it's not clear where the child lives or sleeps most of the time, count them where they stayed on Census Day, April 1.

Communication & Partnership – Statistics in Schools

A free program in the U.S. and Puerto Rico and the Island Areas (Guam, American Samoa, the Northern Mariana Islands, and the U.S. Virgin Islands) for K-12 classrooms.

www.census.gov/schools

- Printed maps
- Kits and activities
- Family take-home pages
- Expanding to include Pre-K for 2020 Census

Communication & Partnership – Webpage

- Developed a page on census.gov that is devoted to the undercount of young children
- Includes research reports, the infographic, the Director's Blog, and previous presentations
- <https://www.census.gov/programs-surveys/decennial-census/2020-census/research-testing/undercount-of-young-children.html>

The screenshot shows the top navigation bar of the U.S. Census Bureau website with a search bar and links for 'BROWSE BY TOPIC', 'EXPLORE DATA', 'LIBRARY', 'SURVEYS/PROGRAMS', 'INFORMATION FOR...', 'FIND A CODE', and 'ABOUT US'. Below the navigation bar is a breadcrumb trail: // Census.gov / Decennial Census of Population and Housing / 2020 Census / Research and Testing / The Undercount of Young Children. The main heading is '2020 Census' followed by 'The Undercount of Young Children'. A left sidebar contains a menu with 'About', 'Overview', 'Research and Testing' (highlighted), 'Census Testing by Year', 'Library', 'News', 'Become a Partner', 'Complete Count Committees', 'Business Opportunities', and '2020 Census Jobs'. Social media icons for Facebook, Twitter, and LinkedIn are visible. The main content area has an 'Overview' section with the text: 'The Census Bureau acknowledges the long-standing undercount of young children in decennial censuses and in Census Bureau surveys. Evaluations show that Census Bureau surveys like the American Community Survey, the Current Population Survey, and the Survey of Income and Program Participation also undercount young children, which can result in biased survey estimates. The differential undercount of this population across geography and demographics makes this a larger problem for some racial and ethnic groups and some parts of the country. However, this issue is not unique to the United States, as research has shown that many other countries have a high net undercount of young children in their censuses. In response to this pervasive issue, the Census Bureau has spent years researching children who were missed in the 2010 Census and taken many steps to attempt to reduce this undercount in the 2020 Census. This research, along with other relevant materials, is presented here.' Below this is a section for 'Published Research Reports' with three entries, each dated 'JULY 2017':
1. '2010 Undercount of Young Children – Characteristics of Children by Age': This report compares the demographic, social, and economic characteristics of children by age group using data from the American Community Survey.
2. '2010 Undercount of Young Children – Analysis of Coverage Followup': This report documents the analysis of the geographic distribution of the 2010 Census Coverage Followup data using two segmentation methods.
3. '2010 Undercount of Young Children – Geographic Distribution of Results': This report documents research on the geographic distribution of the 2010 Census Coverage Followup results related to young children.

Evaluation and Preparation
